

Enterprise Evangelist – Big Data and Analytics Technology Job ID: A011

Job Description

Responsible for advising and guiding on big data and analytics technology adoption programmes within enterprise environments.

Roles and Responsibilities:

- **Technology Strategy and Evangelism:**
 - Navigate technology trends and help enterprise customers develop vendor neutral blueprints for systematic technology adoption
 - Establish critical mass of support for common technology use cases, reference architectures and technical designs within enterprise customers
 - Be the voice of the company for select technology service offerings in the external forums
- **Professional Service Delivery:**
 - Lead and perform billable consulting assignments as needed
 - Partnering with the Practice Managers, ensure successful delivery of professional service engagements to clients
 - Keep abreast of the latest developments in the field and be ready to learn new things
- **Solutions and IP Development:**
 - Contribute to the development of new ideas, technology solutions and intellectual property
 - Conduct research and proactively communicate with the internal teams on the customer needs, emerging opportunities and areas of development

Desirable Qualification:

- Demonstrated expertise and/or industry certifications in big data platforms (such as Hadoop, document stores, graph databases, key value stores, columnar stores, in-memory databases, etc.), data processing frameworks (such as MapReduce, Spark, Storm, Samza, Kafka, etc.), programming technologies (such as Go, Python, Scala, Perl, etc.), enterprise data warehousing solutions, BI and data visualisation technologies, data integration platforms and data governance
- Entrepreneurial passion to develop innovative data solutions
- Strategic thinker, technology leader and change agent
