

## Enterprise Evangelist – Internet of Things (IoT) Technology

Job ID: A012

### Job Description

Responsible for advising and guiding on IoT technology adoption programmes within enterprise environments.

#### Roles and Responsibilities:

- **Technology Strategy and Evangelism:**
  - Navigate technology trends and help enterprise customers develop vendor neutral blueprints for systematic technology adoption
  - Establish critical mass of support for common technology use cases, reference architectures and technical designs within enterprise customers
  - Be the voice of the company for select technology service offerings in the external forums
- **Professional Service Delivery:**
  - Lead and perform billable consulting assignments as needed
  - Partnering with the Practice Managers, ensure successful delivery of professional service engagements to clients
  - Keep abreast of the latest developments in the field and be ready to learn new things
- **Solutions and IP Development:**
  - Contribute to the development of new ideas, technology solutions and intellectual property
  - Conduct research and proactively communicate with the internal teams on the customer needs, emerging opportunities and areas of development

#### Desirable Qualification:

- Demonstrated expertise and/or industry certifications in sensor technologies, SCADA, embedded systems, internet technologies (such as TCP/IP, HTTP, REST, QUIC, Java, etc.), messaging technologies (such as JMS, AMQP, MQTT, JSON, Apache Thrift, Protobuf, CBOR, etc.), communication protocols (such as ZigBee, Wi-Fi, Bluetooth, Near Field Communication, etc.), cloud technologies, database technologies and security standards
- Entrepreneurial passion to develop innovative technology solutions
- Strategic thinker, technology leader and change agent
